PRANEETH MONGAR

Data Engineer | Snowflake · Azure Data Factory · Data Vault 2.0 · SQL · Python
praneethmongar@gmail.com | +91 7396359812 | linkedin.com/in/praneeth-mongar-a68138205 | Hyderabad, India

PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience building ETL/ELT pipelines and cloud data warehouses on Microsoft Azure and Snowflake. Delivered **17+ ERP systems into a single Data Vault 2.0 model** on Snowflake, owning each system from data profiling and mapping through CI/CD release, UAT and production support. Led a SAS to Snowflake migration, built a Python validation framework that **cut QA effort by 30%**, and currently runs Azure Data Factory pipelines for a legacy to SAP S/4HANA migration.

- **17+ ERP systems** loaded into one reusable Data Vault 2.0 model (HUB, LINK, SAT) on Snowflake
- **30% less QA effort** from an automated Python data validation framework
- **SAS to Snowflake migration** led for supply chain analytics
- **INSTA Award, Certificate of Appreciation** from Infosys (Nov 2025) for client-facing delivery

TECHNICAL SKILLS

Cloud and orchestration: Azure Data Factory, Azure DevOps (ADO) pipelines and CI/CD, Azure Data Lake (exposure), Tidal scheduler

Data warehousing: Snowflake, Snow SQL, stored procedures, Data Vault 2.0 (HUB, LINK, SAT), SQL query optimisation

Languages: SQL, Python (automation, data validation frameworks), Scala, Java, shell scripting

Big data: Apache Spark, Hadoop, Hive

Databases: Snowflake, MySQL, MongoDB

Tools: Git and GitHub, Microsoft Power BI, Linux and Unix

PROFESSIONAL EXPERIENCE

Senior Systems Engineer | Infosys, Hyderabad Apr 2025 – Present

Project: data migration from a legacy system to SAP S/4HANA

- Build and manage Azure Data Factory pipelines that move data reliably between legacy source and SAP S/4HANA target environments.
- Write and tune SQL stored procedures for transformation logic so data lands accurately and within business timelines.
- Monitor pipeline runs daily, catching and fixing failures before they affect downstream processes or delivery deadlines.
- Work with data architects and the SAP team to turn business requirements into scalable ETL workflows.
- Maintain documentation of pipeline configuration, transformation logic and data flow for support and future enhancements.

Systems Engineer, Snowflake Developer | Infosys, Hyderabad Mar 2023 – Apr 2025

Project: Data Vault 2.0 ingestion for 17+ ERP systems on Snowflake

- **Delivered 17+ ERP systems** into one Data Vault 2.0 model, owning each system end to end from data profiling to production support.
- **Analysis and mapping:** profiled source data, performed source-to-target mapping analysis, identified mapping gaps and raised them as ADO tickets, then presented and resolved them with business stakeholders.
- **Development:** built HUB, LINK and SAT objects and load stored procedures, with unit testing before release.
- **Release:** set up scheduled loads in the scheduler integrated with Snowflake, kept code in GitHub and promoted it through Dev, QA, Pre-Prod and Prod with ADO CI/CD pipelines.
- **Testing:** took part in SIT, UAT and smoke test result meetings with the business, resolving queries and defects.
- **Production support:** for 1 to 2 weeks after each ERP went live, monitored load correctness and the Snowflake load dashboard, and ran orphan analysis on frequently changing satellite data, documenting root causes daily.

- **Migration:** led the move of legacy SAS workflows to Snowflake and redesigned the architecture for cloud-based analytics across the supply chain domain.
- **Automation:** built Python data validation frameworks that reduced QA effort by 30%.
- **Performance:** tuned SQL on large Snowflake datasets, improving throughput and keeping loads within SLA.
- **INSTA Award (Nov 2025):** during live SIT and UAT demos, resolved failed test cases on the spot, traced issues to data gaps in pre-prod and prod, shipped code updates for new business logic and re-ran the full suite through a Python framework built on the client's suggestion.

Trainee Systems Engineer | Infosys, Mysore Oct 2022 – Mar 2023

- Completed intensive training in SQL, Python, Scala, Apache Spark, Hadoop and MongoDB, building a foundation in ETL development and distributed data engineering.
- Built ETL scripts and transformation pipelines in project simulations, with exposure to cloud data architectures.

AWARDS AND RECOGNITION

- **INSTA Awards, Certificate of Appreciation** (Nov 2025), Infosys Data Analytics, DNA Unit: recognised for hard work and effort in the delivery of WS10.

EDUCATION

B.Tech, Computer Science 2022
